

NATURAL CELLULAR DEFENSE

On August 3rd of 2005, Waiora launched **Natural Cellular Defense (NCD)**, one of the most significant and explosive products in health science. Although the product's patent is entitled "**Epithelial Cell Cancer Drug.**" it is a **100% natural liquid product** and it is classified and sold as a "**dietary supplement.**" NCD is considered **100% safe and non-toxic** by the FDA.

NCD is a **100% natural liquid supplement** containing a **patented form of Zeolite**. Zeolites are **natural volcanic minerals** with a unique, complex crystalline structure that acts like a cage, working at the cellular level **trapping allergens, heavy metals and harmful toxins**. In fact, because it is one of the few negatively charged minerals in nature, Zeolites act as magnets drawing toxins to it, capturing them in its cage and removing them from the body. This unique ability to remove dangerous toxins is well documented. **It was used by the Russian government to absorb radioactive chemicals and other harmful toxins after the Chernobyl disaster.** It has taken Dr. Harvey Kaufman **37 years to research and formulate NCD**.

Natural Cellular Defense and its constituent zeolite have been shown to have the following functions:

- Retains the natural zeolite property of **reducing cancer risk**
- Acts as a **potent anti-oxidant**
- Aids in **balancing bodily pH levels**
- Acts to chelate and **remove heavy metals, toxins** and other harmful substances from the system.
According to the 2005 report from the CDC's Environmental Health Laboratory, there are currently 148 chemicals currently found in the blood and/or urine of Americans.
- Reduces the incidence of **diarrhea**
- **Improves nutrient absorption** in the digestive tract
- Acts to **balance digestive pH**, thus **reducing acid reflux**
- Acts to **stabilize immune system** function (immunomodulatory)
- Acts as a broad spectrum **anti-viral agent**

Waiora's Natural Cellular Defense is protected by **[U.S. Patent No. 6,288,045](#)** entitled **[Epithelial Cell Cancer Drug.](#)** (*Click to see the patent online*)

WHAT ARE EPITHELIAL CELLS?

Epithelial cells are skin tissues that cover and line the body. They cover all the body's organs (throat, lung, heart, breast, prostate, kidneys, liver, ovaries and colon) and line the body's cavities (including the inside of the chest and abdominal cavity). **Cancers of the epithelial cells are called "carcinomas" and make up about 85% of all cancers.**
